

The Way to a Clearer Future!

As the first launch of 2014, the Clear-Guard™ team was excited to see their hard work and persistence pay off. There were many challenges along the way to getting this product to market including an extended development period which was required to get the product just right. The risks were high but with the combined participation of individuals across many departments (R&D, production, innovation, sales, etc.) our focus, professionalism, cooperative spirit, and attention to detail made it all come together.

Clear-Guard is a new, high pressure clear PVC pipe produced with Schedule 40 pressure ratings that are higher than other competing Schedule 80 products. As a high pressure process piping product for the industrial sector, the benefits are well documented including flexibility, light weight, durability and exceptional corrosion resistance. Our clarity provides 360° visibility as required for several applications including dual-containment, clean room and site glass applications.

Clear-Guard™

Applications Include:

- Clear-Guard™ Dual-Containment Systems
- Dual-Containment for High Purity Tubing
- Leak Detection Systems
- Agricultural & Aquacultural Applications
- Chemical Processing/Blending
- Healthcare/Hospital Use
- Laboratory Applications
- Environmental Applications
- Sight Gauge Assemblies
- Displays/Exhibits
- Food & Beverage Processing
