

IPEX System 636® Testing Tee Wins Most Innovative Product Award at CIPHEX West

IPEX's Don Shumansky (middle) accepts the CIPHEX West Most Innovative Product Award for the IPEX System 636 Testing Tee from CIPHEX West Chair Dustyn Tamblyn of EMCO (left) and CIPH President Ralph Suppa.

CIPHEX West is Western Canada's largest trade show and conference for plumbing, hydronics, HVAC, and water treatment. Each year CIPHEX West honours manufacturers for their innovation in seven categories. This year's winners were chosen from over 60 entries.

The **IPEX System 636® Testing Tee** received the award for Most Innovative Product in the heating and ventilation category. Don Shumansky, Sales Manager Southern Alberta, Mechanical, Sales of IPEX, was on hand to accept the award from CIPHEX West Chair Dustyn Tamblyn of EMCO and CIPH President, Ralph Suppa.

The **System 636 Testing Tee** (Heating/Ventilation) is the perfect solution for the increasing demand for periodic flue gas monitoring in gas-fired heating appliances. Previous practice has been to monitor the system by inserting special electronic probes into the vent line during actual operation. Now, the drilling of small holes into vent lines and plugging them afterwards is prohibited. **IPEX's new System 636 Testing Tee** allows an inline access point for flue monitoring using fully certified components. The system is available in both PVC and CPVC.

IPEX is proud that its team's continued dedication to research and development has been recognized by this prestigious award.
