

IPEX Expands Its Line of Large Diameter Sewer Fittings

IPEX prides itself with many industry firsts, particularly in the municipal pipe and fittings marketplace. As a group we are continually breaking new ground and extending the reach of our product lines. These innovations are what have made us the leaders we are today, and our commitment to innovation will ensure this position in the future.

In the first half of the decade there was significant investment made in our London manufacturing facility when we commissioned the largest molding machine in the Aliaxis Group of Companies. At that time, we also upgraded the machine shop and quality control lab allowing for all mold maintenance and testing procedures to be completed in-house.

This investment first resulted in the 2013 launch of 10" & 12" C907 Blue Brute molded pressure fittings – the world's largest. This June, we have continued the momentum with the launch of 21 new configurations of molded sewer fittings. Trench Tough Plus SDR 26 Heavy Wall Gasketed Fittings now boasts sizes up to 12" and the brands SDR 35 Gasketed Fittings range now extends to an industry leading 18" diameter. The project also included the addition of a new 12" configuration to the Ultra-Rib line-up.

IPEX has begun the work to promote this specifiable new offering in the United States and IPEX Inc. has introduced these new fittings to the Canadian marketplace under the Ring-Tite and Ultra Rib Brands.

With over a year and a half in planning the Large Diameter Sewer Fittings Stage Gate Team is proud of their accomplishment. And we're sure there's more to come from this state-of-the-art facility.
