

New Sceptalight LED Fixtures Recognized at MCEE Exhibition

The lighting industry is changing; the incandescent light bulb is being phased out replaced by energy saving options – notably LED. IPEX made the decision to develop an LED solution for the Sceptalight series of fixtures rather than watching the category slowly die. In August 2016 IPEX was proud to introduce Sceptalight LED fixtures to the North American marketplace.

In April 2017 the Quebec Electrical Sales Team presented the Sceptalight LED to the MCEE Innovation Committee while participating at the annual MCEE Exhibition in Montreal, Quebec. The committee evaluates and

recognizes innovative new products in a range of product categories. During the conference IPEX was pleased to receive the 2nd place recognition in the category of 'Exterior Lighting'.

"Being accepted into the competition then receiving the recognition gives us exposure as the exhibition which featured our fixture during the two days at the entrance of the show. Congratulations to everyone. This new product is providing us with many market opportunities" stated Martin Piette, Electrical Sales Manager – Quebec. ■
