Working with great people to make an important impact...

There's no better feeling.

At IPEX, growth comes from teaming up with outstanding people to make a meaningful difference. IPEX is known for producing top-quality, innovative solutions for critical public services such as clean drinking water, sanitation, power, and communication. Our customers – including municipalities that rely on our products to bring these essential services to citizens – are incredibly loyal, rating us well above our competitors for reputation, product range, and customer service.

At the heart of this success is our commitment to hiring passionate, team-oriented people and making their wellbeing our first priority.

With more than 60 years of experience in thermoplastics, IPEX is one of North America's largest producers of high-durability plastic pipe and fitting systems. Over 3,000 people make up our diverse team, from coast to coast across Canada and the United States including 7 locations in the GTA. Mentoring, professional growth, contributing to local communities and outstanding benefits are among the reasons so many of our team leaders have chosen to stay with IPEX for more than 30 years.

In addition to being a leader in an essential industry, we are also dedicated to caring for the environment. IPEX is at the forefront of research and development for piping systems that minimize carbon footprint and reduce resource use. Our Enviro-Tite® pipe, made from a core of recycled material, is recognized as the best-in-class ecologically responsible solution.

Transparent, independently verified studies show we offer the most sustainable piping products available, and by selecting the most energy-efficient equipment and recycling everything from excess pipe material to the water in our cooling process, we are continually improving our manufacturing practices.

As we lead the way toward a sustainable future that meets society's urgent needs including safe and reliable drinking water, we're welcoming new team members who share this vision.
