

## Duraflo® 5-in-1 Roof Flashing

Knowing exactly what size vent pipes will be at a job site when you arrive is not always possible. With Duraflo® 5-in-1 roof flashing you carry 1 roof flashing in inventory instead of 5.

Install over a 1-1/4, 1-1/2, 2, 3 or 4 inch plumbing vent stack to seal the roof opening. Press fit application, no sealant needed. The flashing will be secured to the roof and shingled around as part of the roofing application. The flexible base has a tear-away and size adjustable vent pipe opening.

5-in-1 Roof Flashing Pipe Size 1.25" to 4" (12/carton)

Color	Part Number
Black	551244BL

### Installation Instructions

- If replacing an existing flashing remove existing part before installing the Multi 5-in-1 Roof Flashing
- Determine the size of the vent pipe
- Match the pipe size with the correct tear line on the Multi 5 in 1 Roof Flashing
- Break the seal with a blunt object Fig. 1, and tear the material out by hand, as shown in Fig. 2
- Carefully lift the shingles that will be used to cover the upper half of the 5-in-1 flange. Push the Multi 5-in-1 Roof Flashing over the vent pipe and secure the flange to the roof deck with roofing nails or cladding screws
- Replace the shingles removed earlier, and secure over the top half of the flange

#### Notes:

- Do not use a sharp instrument to pierce or cut the Multi 5-in-1 seal
- Suitable for 3.5/12 – 12/12 roof pitches
- Not to be used with petroleum-based sealants
- Suitable for cold weather applications, use caution during installation in extreme conditions
- Adhere to installation requirements as determined by the local regulatory authorities

#### Features:

- Suitable for roof pitches from 3.5/12 – 12/12
- UV resistant polypropylene
- Built in water deflectors
- Cold impact resistant to -40°
