EasyFit Labelling System

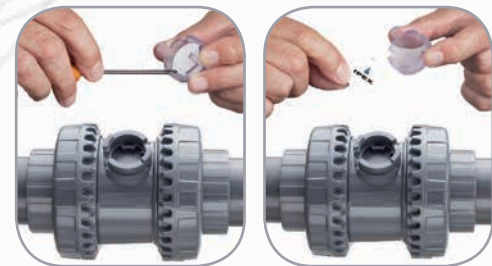

It is often necessary to customize a valve by labelling or tagging it in order to mark and identify it according to specific needs or service. The EasyFit Labelling System is a complete product line developed to customize individual valves, and includes all the necessary tools: LCE Module, LSE Set and the EasyFit software.

LCE MODULE – Transparent Service Plug with Tag Holder

To take advantage of the EasyFit Labelling System, EasyFit valves are designed to house the LCE plastic module made up of the transparent PVC service plug and the white PVC tag holder embedded in it. The LCE module (transparent plug and tag holder) is factory assembled on VXE and SXE EasyFit valves and can be ordered separately for the VEE EasyFit model.

LSE SET – Label Design and Printing

EasyFit LSE set contains circular labels die cut on white polyethylene self-adhesive A4 sheets, and a CD with label creation and printer management software. The non hygroscopic label sheets are suitable for normal inkjet and laser printers. Packages are available for all 6 valve sizes (1/2" through 2") and include up to 500 labels.

THE SOFTWARE

The user friendly software makes label creation simple and fast. The software allows you to overlay text and images as well as import data from spreadsheets. The printer setting wizard makes it easy to print labels using any common inkjet or laser printer. Once printed, the labels are ready to be applied on the white PVC tag holder and installed into the transparent service plug.
